Shock Absorber Guide

Sachs-Boge 7D0 413 031C & 701 513 031N Internals: Twin tube, hydraulic	Same shock fitted to the EV when new and sold as a replacement by VW dealers.
Bilstein 7D0 413 031C-BIL & 701 513 031N-BIL Internals: Twin tube, low pressure gas	Low pressure gas, very similar ride characteristics as Sachs-Boge above.
Bilstein B46-1911 & B46-1912 Internals: Mono tube, high pressure gas	High pressure gas, firmer ride than the above, recommended for EVC (all four) and Rialta (front only). May also be used on all GL, GLS & MV models but, the ride will be more firm on the shorter, lighter vehicle.
Winnebago 112033-02-000 Bilstein: 701 513 031C Internals: Mono tube, high pressure gas	High pressure Bilstein gas for the rear of the Rialta only. This is the same shock sold by a Winnebago dealer.
Koni 82 2379 & 82 2380 Internals: Twin tube, hydraulic	This is the only shock available for the EV in which the level of rebound can be adjusted to your personal preference.

Some of the parts listed may not be applicable for the Winnebago Rialta. In general, the Winnebago models are built on the preceding year VW chassis, or in some cases two years prior. For example, the 2004 and 2005 Rialta models are built on a 2003 VW Eurovan chassis. The tenth letter of your VIN will provide this information.

Please check our website or e-mail for information or clarification on any item shown on this list. Every attempt has been made to obtain parts from the original equipment manufacturer, known in the industry as OE or OEM. We sell genuine VW, OE/OEM and quality aftermarket parts at rock bottom prices. Your comments and suggestions are welcomed.

Thank you for your patronage.
